

# UPILOW

KEEPING YOUR MIND AND BODY HEALTHY

# IDEA

# PROPOSAL

This is just an idea proposed to work towards a healthier future.

# MEET THE TRIO !

COVID19 has brought about many changes in our lifestyle, from the way we work to the way how we relax.

We often find ourselves spending excessive amounts of time sitting in one place and not moving around enough.

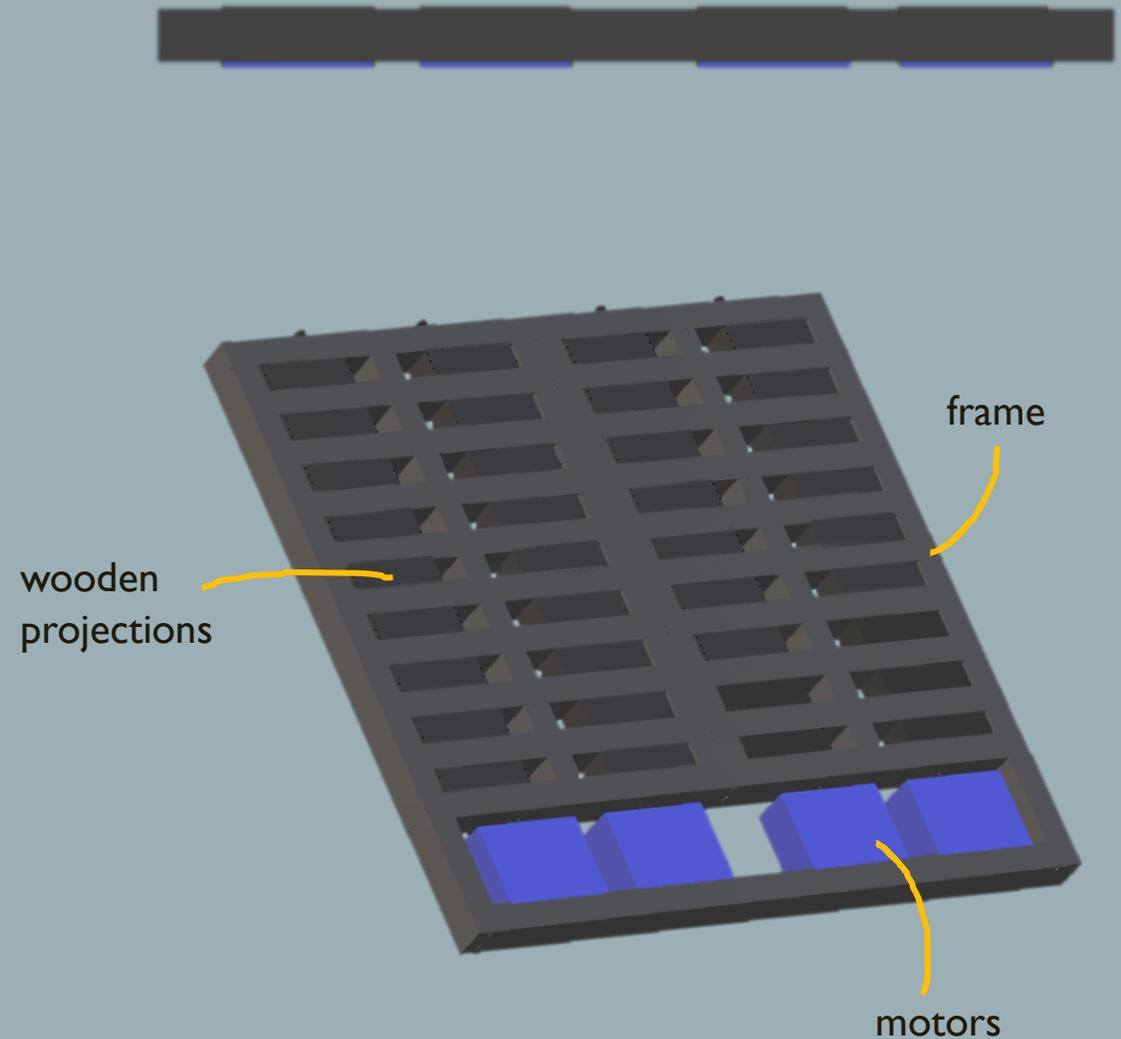

The **UPILOW** allows you to set an interval of time and forces you to get up from your chair when the set time interval ends.

Therefore making sure you get up at regular intervals of time!

# DEFAULT POSITION

UPPILLOW consists of a motorized grid under two layers of cushioning that houses four rows of movable finger-like projections made out of hard wood.

In the default position, the grid will be in the position as shown with the projections flushed into the grid, which enables the person to sit on top of it comfortably.

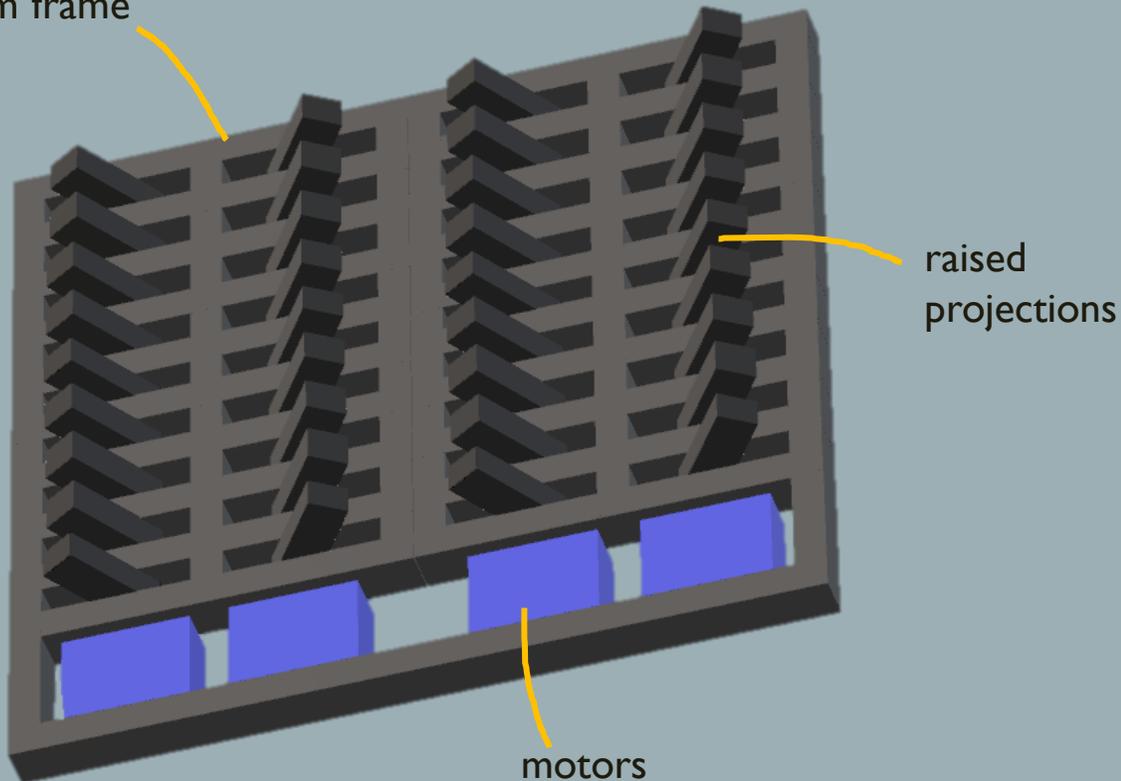

# UP

## POSITION

foam frame

raised  
projections

motors

When the set time limit is over, UPILLOW's motors that are powered by an inbuilt battery, raise the wooden projections to make the cushion's surface very uneven.

We can assure that this will not cause any pain to the user due to the two layers of cushioning, however the cushion will become very uncomfortable forcing you to get up from the chair.

Therefore this makes sure that you get up from your chair at regular intervals of time, hence keeping your body and mind healthy. The grid will reset back to the default position only when the reset timer (which is configured by the user, the timer has a prescribed min/max limit within which it can be configured) expires, thus enabling the user to take timed breaks between work.

# UPILOW IS COMPLETELY CUSTOMIZABLE

UPILOW will allow you to choose any size, shape, colour and pattern for your pillow depending on what you want.

UPILOW

SO, WHOSE

UP

FOR A

HEALTHIER

FUTURE ?
