

## Sculpture - Science Lab for a Garden

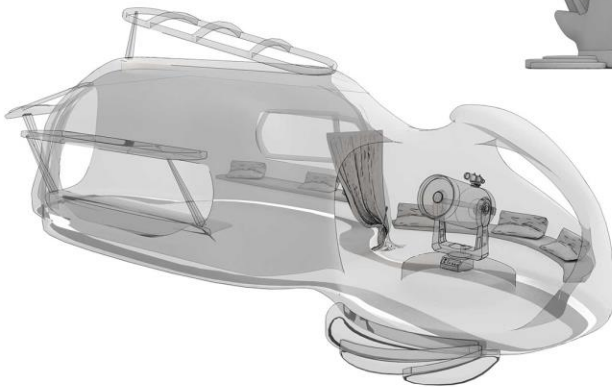

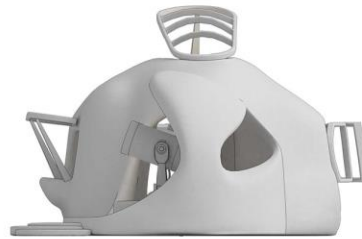

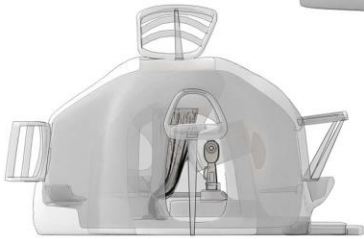

Designer: Diogo Mendes Pereira

**“Science Lab for a Garden”** is an organic/biomorphic sculpture which promotes an environmental place to develop scientific and empirical research in a more contemplative way, at a natural environment. This sculpture pretends to bring the awareness of analysing nature, not mainly through “data” but also through our natural senses and to develop empirical researches closer to nature. This organic sculpture promotes the experience of scientific research in connection to the Natural Environment - by Bringing the Scientists to the garden, we pretend to stimulate the empirical research and inspire investigators to contemplate and feel nature for their reflective processes, in contrast with the hermetic scientific laboratories.
